EDUCATION

Northeastern University

Bachelor of Science in Computer Science

September 2020 - December 2023

Boston, MA

TECHNICAL SKILLS

Languages & Frameworks:

Kotlin (Compose), Java, Python, JavaScript (React, Node), HTML, CSS

Technologies & Tools:

Android Studio | MongoDB | AWS | Git | Ubuntu | Postman | Figma

EXPERIENCE

UIC Payments, Fremont, CA

Software Engineer

October 2025 - Present

- Engineered a native Android POS application for NEXGO hardware terminals deployed nationwide across the restaurant and retail industry, designing responsive layouts tailored to diverse screen sizes and hardware inputs (touchscreens, physical keypads)
- Achieved near-100% transaction reliability in production by systematically addressing edge cases, resolving only one reported transaction flow failure across all active deployments
- Drove the development of custom Android launcher capable of receiving remote MQTT commands, facilitating automated operations such as terminal reboots and OTA app updates

Agrofocal Technologies, San Jose, CA

Software Developer

January 2024 - October 2025

- Automated data validation workflows through monitoring solutions (PyMongo, boto3, Cron), reducing manual oversight by 10+ hours per week
- Designed an OTA (over-the-air) update pipeline cutting end-to-end software deployment time from 5+ hours per release to a fully automated process
- Led the development of a React admin portal and an ArcGIS geospatial visualization tool, reducing cross-team coordination by ~80% and custom reporting requests by ~50%
- Addressed costly yield estimation errors from model misclassifications by developing post-processing filtering algorithms, improving prediction accuracy by 20%+

Software Developer Intern & Co-op

July 2022 - December 2023

- Optimized computer vision models (PyTorch/TensorRT) and implemented an OpenCV motion tracking algorithm, reducing server-side processing overhead by 50%
- Addressed RTSP video streaming bottlenecks on Android cameras via video encoding optimizations, maintaining target FPS and near-zero frame drops

PROJECTS

nexus

November 2023 - April 2025

- Built a *League of Legends* analytics platform with Next.js and Tailwind CSS
- Streamlined game metadata and asset management through Data Dragon API and AWS S3
- Designed RESTful API connecting Riot Games API to MongoDB via Express.js backend, enabling efficient user and game statistics retrieval
